On **4 June 2026** the General Pharmaceutical Council's Investigating Committee considered an allegation in relation to **Mr Bilal Hussain, registration number: 2220710** and determined to issue the registrant concerned with a warning in relation to the conduct alleged.

The Committee concluded that the appropriate outcome in this case is a warning with the wording of:

> Mr Hussain is a registered pharmacist who was a regular, locum pharmacist at a community pharmacy. Between September and December 2023, he administered approximately 300 flu vaccines without making an entry on patients' records that they had received a vaccine.
>
> Mr Hussain was told at the time that his failure to make appropriate records was creating a risk that patients were attending a local GP surgery to receive a flu vaccine which they had already received, however he continued to fail to make records of flu vaccines that he had administered.
>
> Mr Hussain has breached the following GPhC standards for pharmacy professionals: Standard 2 - Pharmacy professionals must work in partnership with others, which includes that they must make records of the care they provide.
>
> Standard 8 - Pharmacy professionals must speak up when they have concerns or when things go wrong, which includes pharmacy professionals reflecting on feedback and concerns, taking action as appropriate and thinking about what can be done to prevent the same thing happening again.
>
> Mr Hussain is warned that when providing care and treatment to patients, including administering vaccines, he must make records of that care contemporaneously or as soon as practicable, to ensure that others involved in the patients' care are aware of those treatments. If Mr Hussain receives feedback or concerns about his practice, he should reflect on that and take appropriate action to prevent reoccurrence.

This warning will be published on the register and will be available for 12 months.
